

The all new ActivDesk.

Smarter. Safer. Beautiful.

Effortlessly beautiful. Powdercoated legs, base and bench top gives your bench the style and sophistication it deserves. A front chamfered edge and radiused corners create a modern bench top look without the join edge associated with laminates. All this ensures your desk sits proudly out from the pack and is always showing off its

Software control made simple.

Compatible with Mac and Windows, LINAK© software control gives you the flexibility of operating your desk via your computer.

good side.

This software allows you to easily set goals, set up alerts, track time spent standing, save your preset heights and export all your hard earnt data to Excel for recording.

Stunning. Inside and out.

Utlising proven inline linear actuator technology, the ActivDesk is equipped with one of the world's leading actuator products, brought to you by industry leader, LINAK.

maintenance free, microprocessor controlled lifting system featuring powerful integrated 18V DC motors.

Invisible gliding pads and synchronous drive of the middle profile ensure a low pleasant noise level while in operation and the inbuilt anti-collision technology of PIEZO® ensures you and your equipment remain safe at all times.

Science. It's an art.

Expandable Framework.

Do you love your old desk but you're concerned about how much time you spend sitting at your fixed height desk?

Utilising the all aluminum framework and proven lifting actuator technology available with the ActivDesk, the retrofit kit package we have available ensures that you can keep your existing bench and style that you love, without the compromise and heartache.

Simply tell us what your bench size is and we'll do the rest. Simple, cost effective height adjustment is just a heartbeat away.

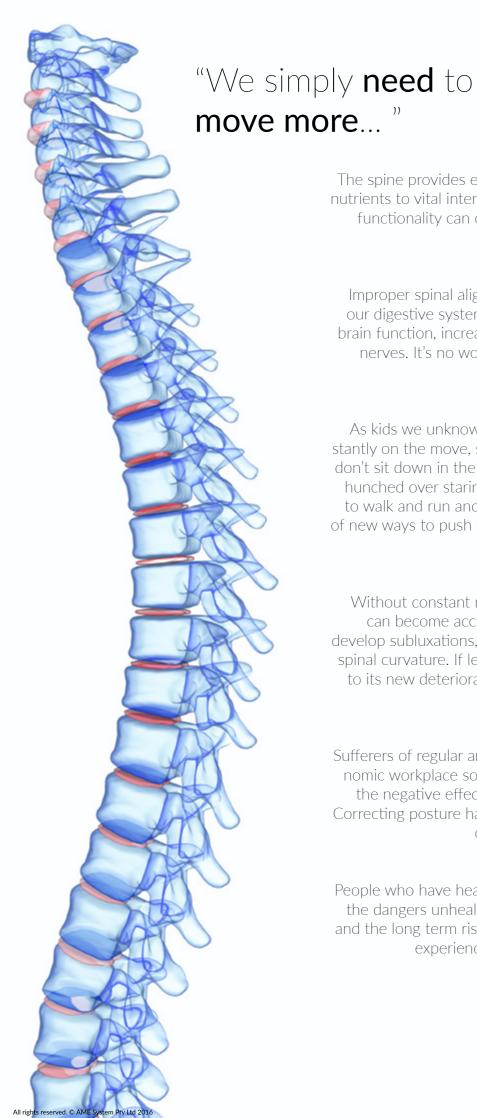

Retrofit your desk.

We ship you the lifting kit, the legs and our framework and you do the rest.

Whether you've got a home office or an office across town, we ship directly to you with instructions on assembly.

No more excuses, it's time you put you and your health first.

Accessorise, your way.

ActivDesk has a wide selection of accessories designed to compliment and tidy up your desk.

Whether its a monitor arm with interchangeable insert colours and inbuilt cable management to free up some of the clutter, or a power board to ensure that all the leads terminate underneath the bench top, or some cable management clips to ensure that each cable is run properly and hidden away, we've got you covered.

Each accessory is designed to keep all your cables and technology under control and minimise mess. Our goal is to ensure that the only lead you have hanging off your desk is one mains cable.

With that goal in mind, we think your biggest concern should be deciding what colour you'd like your legs to be and where you think it would look best in your space.

The spine provides essential protection and aids the supply of nutrients to vital internal organs. Even the slightest decrease in functionality can cause damage to our body's complex biosphere.

Improper spinal alignment caused by poor posture can block our digestive system, affect our happiness, decrease positive brain function, increase stress and constrict blood vessels and nerves. It's no wonder we are constantly being bombarded with recommendations to keep moving.

As kids we unknowingly take care of our backs. We are constantly on the move, shifting from one position to another. We don't sit down in the same position every single day, we aren't hunched over staring at budgets or invoices. We are learning to walk and run and our brains are working overtime to think of new ways to push our spines, not just taking it or the rest of our bodies abilities for granted.

Without constant movement and regular exercise, our spine can become accustomed to a lack of motion and begin to develop subluxations, slipped discs, sore muscles and incorrect spinal curvature. If left untreated, the body will begin to adapt to its new deteriorated conditions and can cause permanent damage.

Sufferers of regular and chronic back pain require quality ergonomic workplace solutions to help them manage and combat the negative effects bad sitting posture has on their health. Correcting posture has been proved to help minimise pain and contribute to a happier, healthier lifestyle.

People who have healthy backs however are often unaware of the dangers unhealthy sitting habits can have on their spineand the long term risks it poses, with up to 80% of Australians experiencing back pain at some point in their lives.
